Picture Install Guide (9 Easy Steps)

Step ZERO

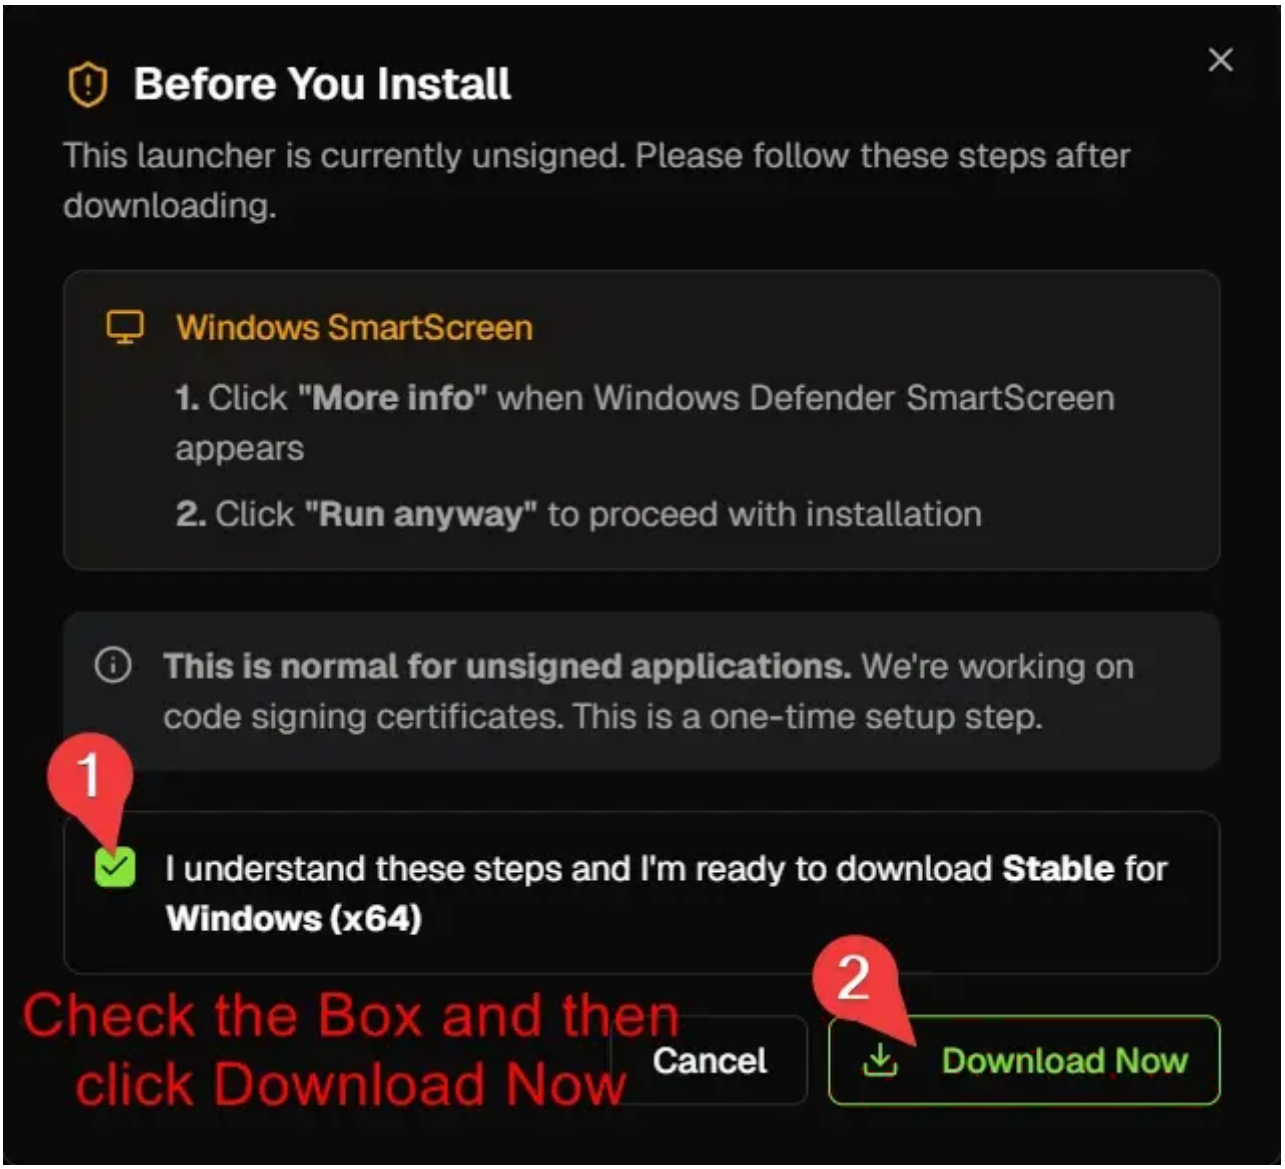

Close ALL RuneLite Clients before continuing

Step 1

- Visit https://ganomsoftware.com/dashboard/launcher
- Click "Download" for your Operating System, it should auto select the correct one

Step 2

- Check the box and then click "Download Now"

Step 3

- Go to where the GanomSoftware Laucher Setup file downloaded, usually the Downloads folder, and run it

Step 4

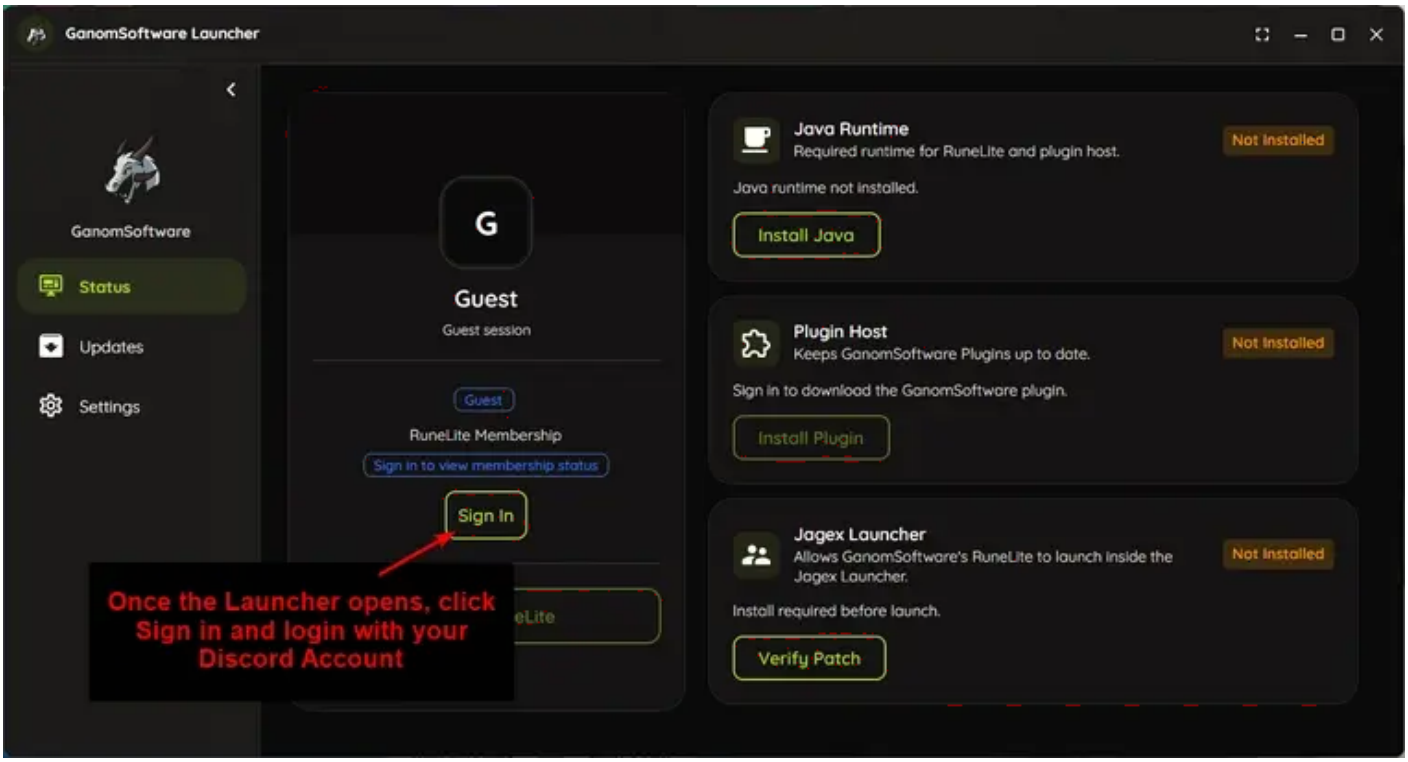

- When you try to run the GanomSoftware Launcher Setup file, you'll get this popup. Click "More Info" and then in the bottom right, click "Run anyways" after it appears

Step 4.5

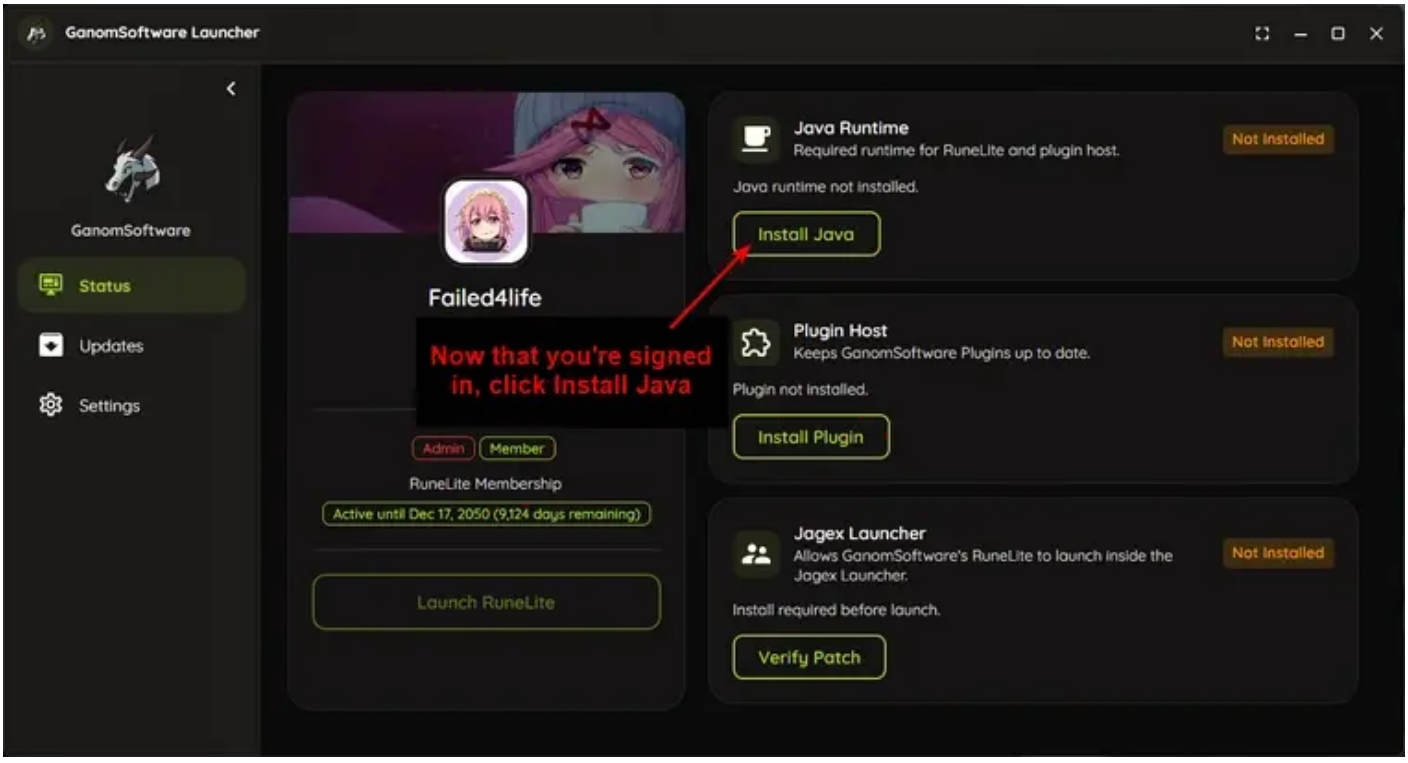

- This is a continuation of Step 4, click "Run anyways" and the GanomSoftware Launcher will install

Step 5

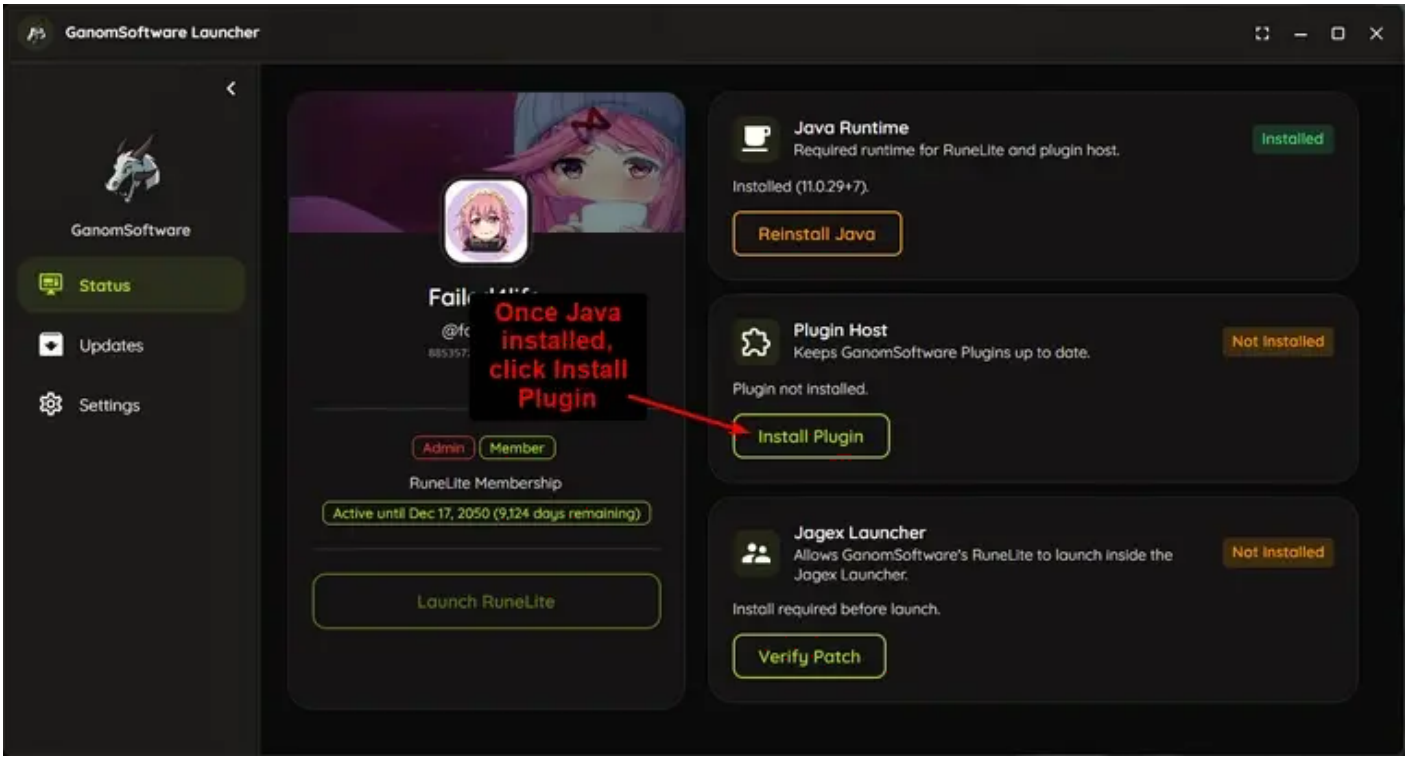

- After you've installed the GanomSoftware Launcher and it opens, click the "Sign in" button and login with your Discord account that you've purchased with

Step 6

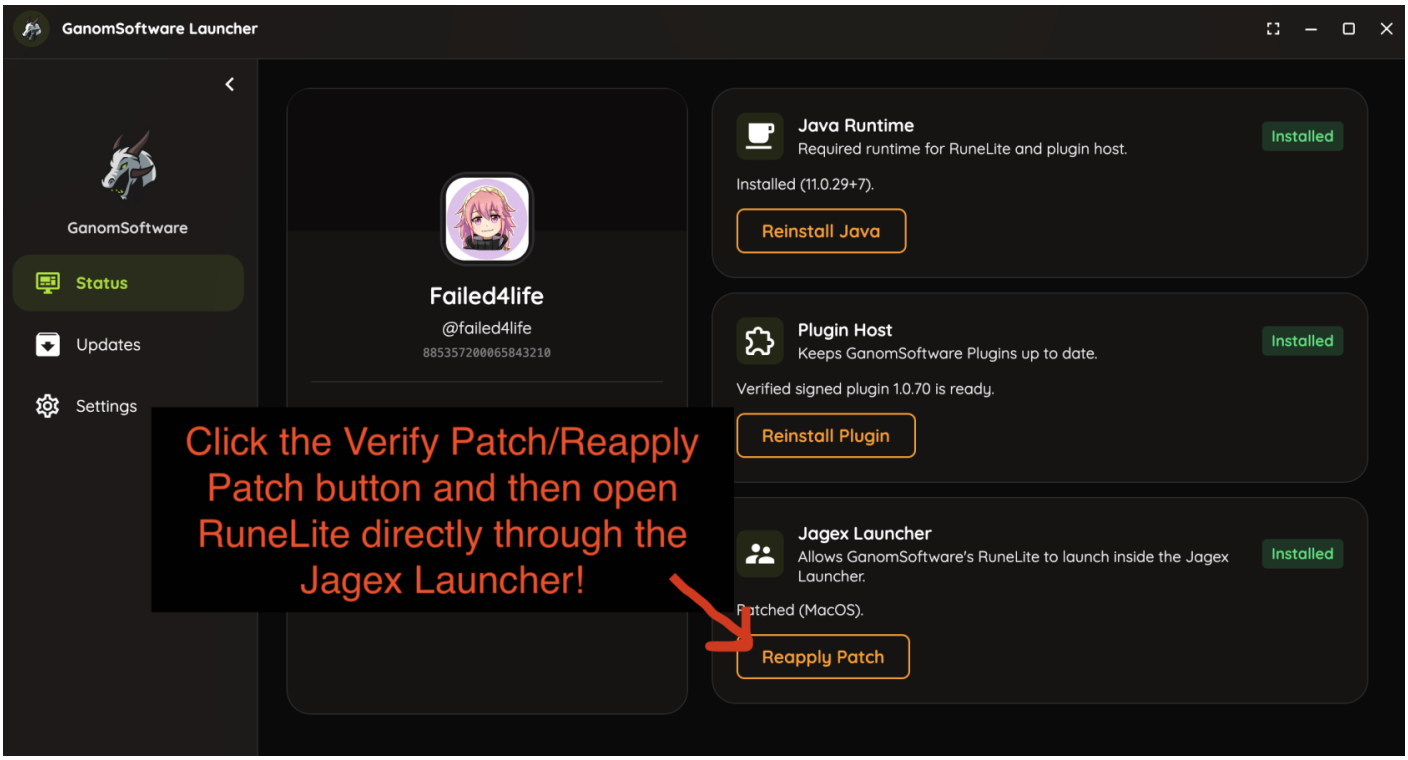

- Once you're logged in, click the Install Java button to install Java 11. Java 11 is required to use our RuneLite plugins

Step 7

- Next, click the "Install Plugin" button to install our GanomSoftware plugins

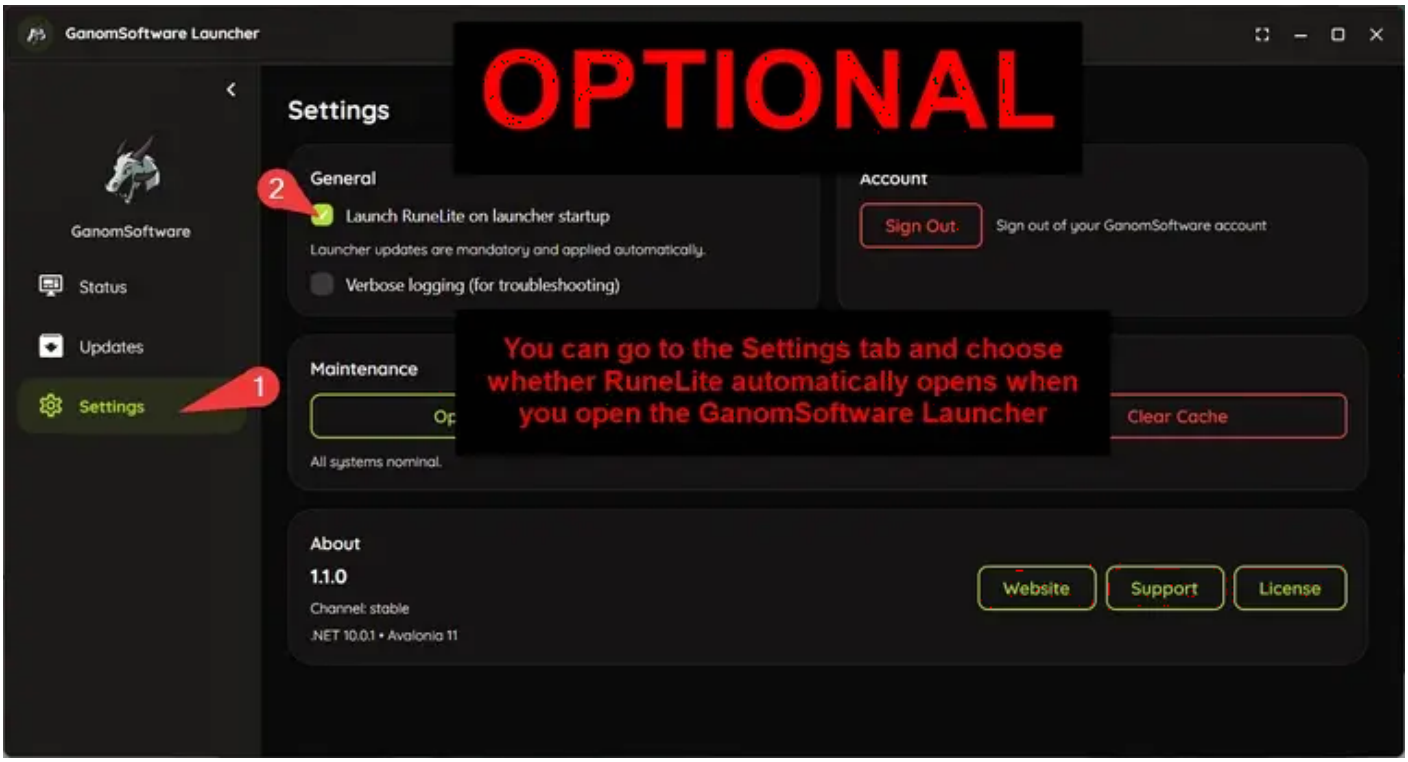

Step 8 (Jagex Launcher)

- Click the "Verify Patch" button to make our plugins work with the Jagex Launcher. Then you will open RuneLite through the Jagex Launcher as normal and our plugins will load in!

- Note: If you get an error, or your RuneLite client does not open when you click Play in the Jagex Launcher, reinstall RuneLite from runelite.net and press the "Verify Patch/Reapply Patch" button again and it should resolve the issue!

Step 9 (Done/Optional)

- After the first setup, by default, a legacy RuneLite client will automatically open when you open the GanomSoftware Launcher. If you do not want this, you can go into the Settings tab on the Left and then uncheck "Launch RuneLite on launcher startup". With the Jagex Launcher now being required, I'd definitely recommend turning this setting off!
